THE CLUMSIES

f<3lings

How does one communicate happiness, excitement, or tenderness through the sensation of flavour? And if it's true that there can be recipes that express our feelings, how else can a feeling be conveyed?

Does happiness have a colour?
If excitement was a melody, what would it sound like?
How can a heartbeat reveal tenderness?

We got inspiration from three emotions which we then expressed through taste creations -our new recipes-, but also through stimuli addressed to, other than the mouth, to the eye, ear and heart.

Between a lucky day, a not so lucky day and a lucky 3,
between happiness, excitement and tenderness, luck is always a factor.

Research has suggested two main reasons why yellow is considered the happiest color. Many studies have linked the psychological powers of yellow to the sun. Sunlight helps to lift our mood and improve our outlook on life as well as being the source of life on earth. This connection suggests that the brain is programmed to associate yellow with these positive effects of sunlight and stimulate the nervous system. The second reason scientists believe yellow has mood lifting effects is the ability of yellow to stand out from other colors in the spectrum.

A smiley, sometimes referred to as a smiley face, is a basic ideogram that represents hapiness. Since the 1950s it has become part of popular culture worldwide, used either as a standalone ideogram, or as a form of communication, such as emoticons.

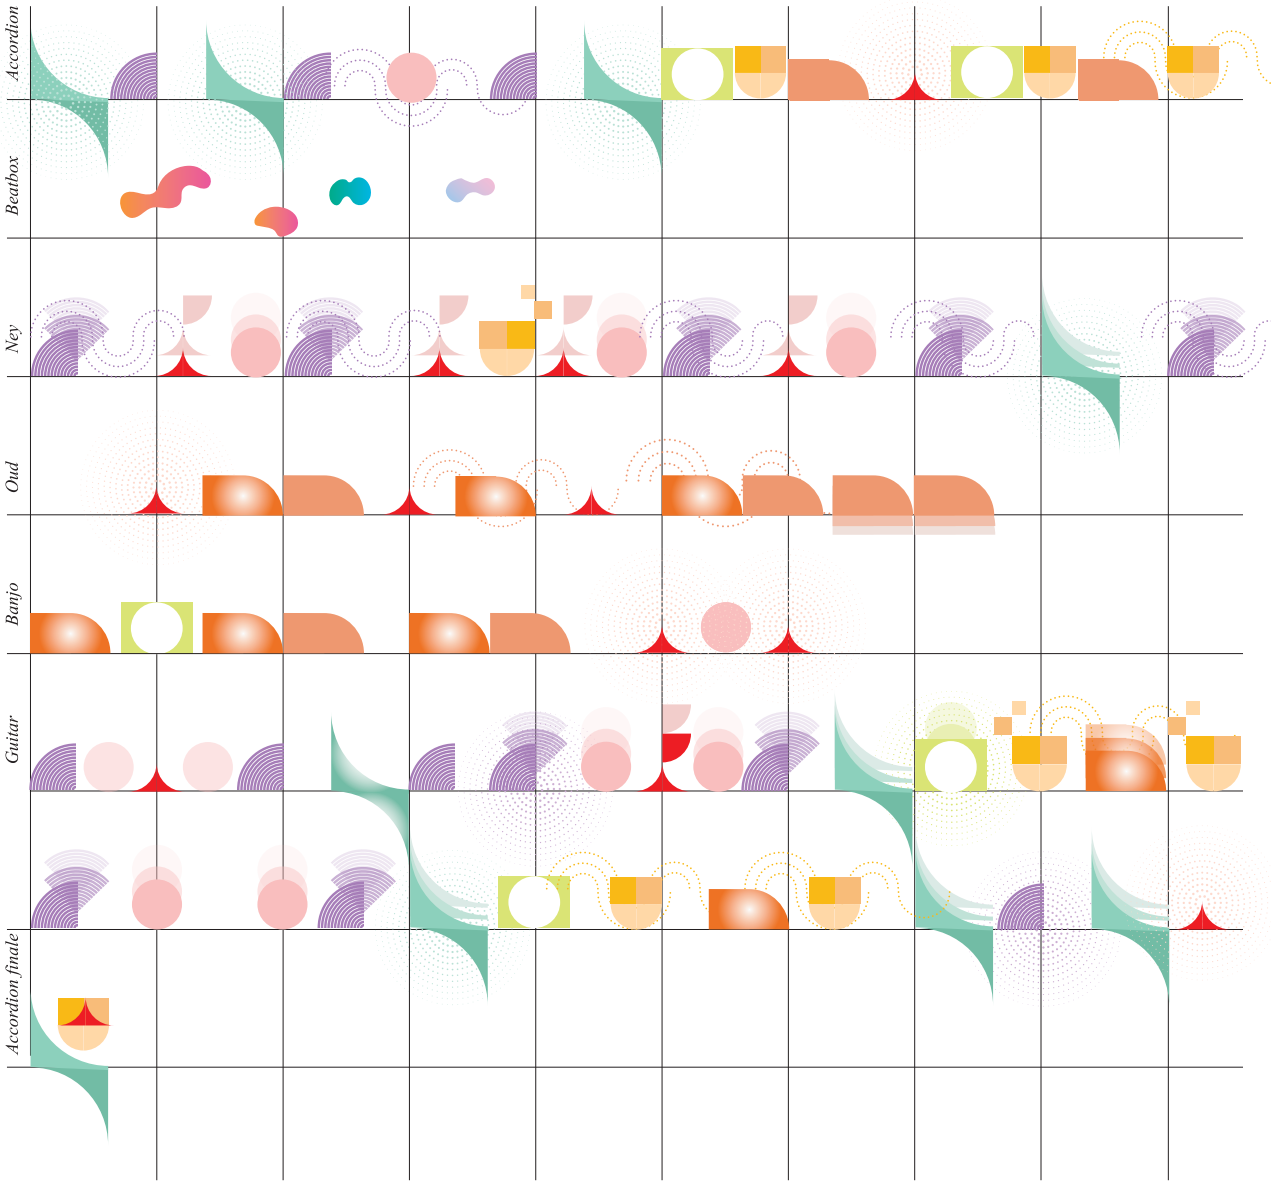
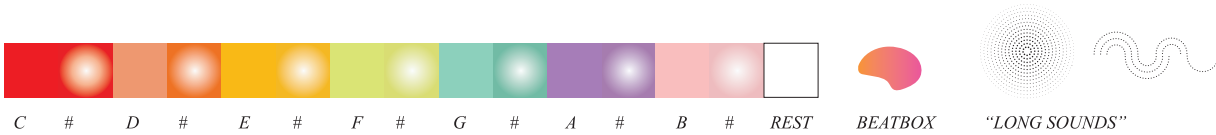
THEME

Excitement





Listening to music releases endorphins in the brain. Endorphins give us a heightened feeling of excitement. In addition to feeling euphoric, endorphins quell anxiety, ease pain and stabilize the immune system. With high endorphin levels, we have fewer negative effects of stress.

... *10€*

another Colada

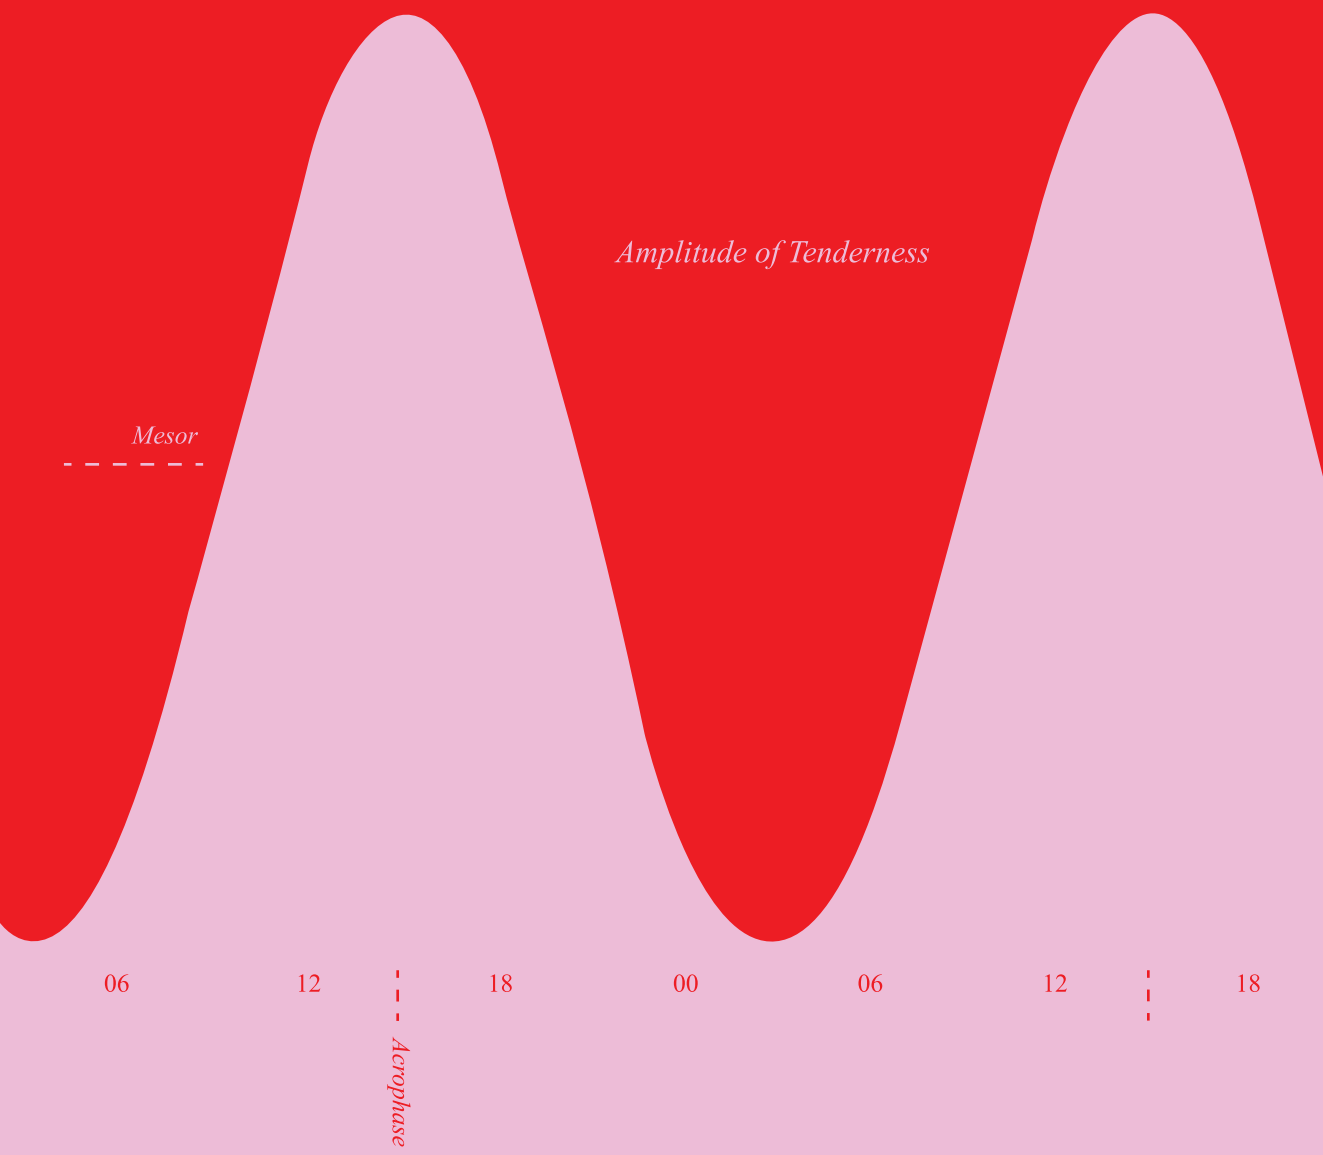
Tenderness moments



Your heart rate or rhythm can change when you when you are feeling concern, gentle affection, or warmth.

Circardian rhythm of Tenderness moments representation in which a cosine curve with a period at or near 24hours is fit to the data by the least-squares method. The parameters that are of interest are acrophase (peak time of tenderness moment), amplitude of tenderness moment (peak-to-nadir difference) and mesor (midline estimating time of rythm)

“And what is the use of a book,
thought Alice,
without pictures or conversation?”

Quote by the book ***Alice's Adventures in Wonderland***
